The Trighest Number Previously Peid For' (Total or Independent) is the highest number found in the appropriate box in column 1.

This collection of information is required by 97 CFR 1.16. The information is required to obtain to retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentially is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete including gathering, propering, and submitting the completed application form to the USPTO. Three will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief information Officer, U.S. Patient and Trademark Office, U.S. Depentment of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450, DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

Subject: Our Ref: TAMPPAT-13, App. No. 10/532,148

Here is the text of claim 30 rewritten in independent form. Please enter this change by examiner's amendment, and charge the \$200 additional independent claim fee to Deposit Account No. 50-2663.

30. (currently amended) The method of claim 27 A method for determining a radial modulus of clasticity of a paper web that can be recled or wound on a reel, in which method the connection between the force and deflection of the paper web arranged in layers in the reel is measured, wherein the method comprises the steps of:

reeling or winding the paper web to form a reel in a reeling or winding position, the reel defining a reel axis and a radial direction toward the reel axis;

transferring the reel from the reeling or winding position to a measurement position; and

Fee paid

making measurements of force and deflection so as to allow calculating the radial modulus of elasticity of the reel of the paper web in the measurement position outside the reeling or winding position, wherein the radial modulus of elasticity of the paper web is determined by performing a force and a deflection measurement on different adjacent reels by transferring a press member successively on top of said adjacent reels.
